RTCU AX9 turbo
Technical Manual
Version 1.03

logic IO
The M2M Enabler

Introduction

This manual contains technical documentation which allows for easy installation and use of the **RTCU AX9 turbo** product. For information on the programming and software configuration of the product please refer to the RTCU IDE documentation.

The RTCU AX9 turbo adds a new chapter to the highly successful era of the AX9 series offering a wide range of new features and performance improvements while still resting on the proven track record and confidence of the RTCU AX9i pro.

The RTCU AX9 turbo uses the next generation NX32 execution model, and is fully backward compatible with the X32 execution model of the former AX9 series. Existing software will therefore be able to operate without any changes or costly re-testing.
Mechanically and electrically the AX9 turbo is fully back-ward compatible with the RTCU AX9i pro and constitutes therefore a direct plug-in replacement.

The RTCU AX9 turbo has been designed from the ground up for professional wireless industrial applications with its strong on-board I/O capabilities and multiple communication interfaces such as: Ethernet, dual RS232, dual RS485, 1-Wire and USB.

For the most demanding applications the RTCU AX9 turbo operates with a GSM 3G/HSDPA engine with a switchable dual antenna design supporting both an on-board as well as an external GSM antenna.

The on-board I/O system can be expanded almost indefinitely and completely transparently by adding external MODBUS compatible I/O modules! This unique I/O expansion capability, combined with the ability to operate as a MODBUS master and slave simultaneously, positions the RTCU AX9 turbo as the perfect product for SCADA-like applications.

The RTCU AX9 turbo rests on the **RTCU M2M Platform** that brings all the necessary tools together to develop, implement and maintain today's sophisticated M2M/IoT applications.

For detailed information on the powerful RTCU M2M Platform, please refer to the *RTCU M2M Platform datasheet*.

The technical highlights of the RTCU AX9 turbo:

- ➢ Based on the **RTCU M2M Platform**[1]
- ➢ **NX32 execution architecture**.
    - o RTCU IDE development tool with a full featured device simulator.
    - o Huge standard API with more than 800+ functions.
    - o Comprehensive protocol support, including:
      TCP-UDP/IP, FTP, SMTP, RACP, MQTT, MODBUS, NMP/Garmin FMI.
    - o Full backward compatibility with existing X32 applications.
- ➢ High-speed **3G/HSDPA GSM engine**. Backward compatible with 2G/2.5G.
- ➢ **On-board Ethernet interface.**
- ➢ Medium range **ISM band RF transceiver** with on-board antenna.
- ➢ **Internal and external GSM antenna** connector. Selectable from application.
- ➢ Internal SIM-card reader.
- ➢ **Digitized audio** can be played over GSM.
- ➢ **DTMF** support for implementation of Interactive Voice Response applications.
- ➢ Enhanced memory sub-system with **fast program execution.**
- ➢ Huge data-flash/logger memory with a capacity **of 8.5 MB**.
- ➢ Internal **8 MB FAT32 flash drive**.
- ➢ Standard FAT32 **Micro SD-CARD** reader with up to 32 GB capacity.
- ➢ **2 x RS232** channels and **2 x RS485** channels.
- ➢ **4 x analog inputs** with 0..10 volt / 0..20 mA with **12 bit precision**.
- ➢ **4 x analog outputs** with 0..10 volt / 0..20 mA.
- ➢ **5 x digital inputs** and **4 x high-power relays**.
- ➢ Up to 4 digital inputs can be configured as IEC62053-31 Class A compliant.
- ➢ **Expandable I/O** with standard MODBUS modules.
- ➢ **1-Wire bus** for accessories such as ID-button reader, temperature sensors, etc.
- ➢ Wide AC/DC power operating range from **100..260VAC / 8..36 VDC**.
- ➢ On-board **high-capacity Li-Ion battery**.
- ➢ **12/24 Volt DC-out capability** for powering external equipment.
- ➢ Advanced **power-management** with wake-up on a wide range of events.
- ➢ High-speed **mini-USB programming** connector.
- ➢ **Intrusion detection**.
- ➢ Housed in a **ruggedized plastic** encapsulation with cable glands.
- ➢ **IP65** protected for outdoor usage.
- ➢ Fully supported by the **RTCU Gateway 2** and the **RTCU Deployment Server**.
- ➢ **Accessories**: Bluetooth, Camera, 1-wire accessories, MODBUS modules, etc.

---

Connection Overview

Connections to external equipment are done via large and easy-to-use screw terminal blocks which are accessible when the lid is removed. The placement of the terminals makes installation easy by using the PG glands and thereby maintaining the IP-65 protection.

The RTCU AX9 turbo is delivered with three PG11 glands and an additional two PG9 blind plugs that can be replaced with PG9 glands if additional cable entry capacity should be required.
The stacked terminals contain connections for: analog and digital inputs/outputs, 12V/24 DC-Output and DC power input.

The angled terminals contain connections for the communication interfaces: RS232 Port 1, RS232 Port 2, RS485 Port 1, RS485 Port 2, 1-Wire and the +3.3V DC-Output.

Also located inside the RTCU AX9 turbo are the: SIM card reader, Micro SD card reader, DIP - switches, Ethernet and a USB-B high-speed programming connector.

Angled terminal front row overview

Terminal Name	Description
SER1_TXD	Transmit data from serial port 1, RS232 compatible.
SER1_RXD	Receive data for serial port 1, RS232 compatible.
DEV_DET	Reserved for accessories.
SGND	Signal ground.
1Wire	1-Wire bus.
1Wire-LED	1-Wire ID-Button LED output.
SGND	Signal ground.
RS485_2+	RS485 non-inverting signal for RS485 port 2.
RS485_2-	RS485 inverting signal for RS485 port 2.

Angled terminal back row overview

Terminal Name	Description
SER2_TXD	Transmit data from serial port 2, RS232 compatible.
SER2_RXD	Receive data for serial port 2, RS232 compatible.
SER2_CTS	Clear-To-Send for serial port 2, RS232 compatible.
SER2_RTS	Request-To-Send for serial port 2, RS232 compatible.
SGND	Signal ground.
DCOUT33	+3.3V / 300mA DC output for external equipment.
RS485_1+	RS485 non-inverting signal for RS485 port 1.
RS485_1-	RS485 inverting signal for RS485 port 1.
SGND	Signal ground.

VAC terminal overview

Terminal Name	Description
N	100-260VAC (50/60Hz) **N**ull input.
N	*(internally tied together)*
P	100-260VAC (50/60Hz) **P**hase input.
P	*(internally tied together)*
⏚	Protective earth terminal for the AC power.
⏚	*(internally tied together)*

Mini-USB connector

This is a standard mini-USB-B connector and is used for communicating with the RTCU IDE (or other RACP-compliant applications).

Ethernet connector

This is a standard IEEE 802.3 compatible 10Base-T Ethernet connector. Please use an appropriate connector and cable, such as a standard CAT-5 twisted pair patch cable.

Logic IO ApS.   Ph: (+45) 7625 0210
Holmboes Allé 14   Fax: (+45) 7625 0211

Denmark   www.logicio.com

Power supply

The RTCU AX9 turbo unit can be supplied with either 100-260VAC (50/60Hz) or 8-36VDC or both supply types simultaneously.

The RTCU AX9 turbo also contains an internal high capacity backup battery, which will supply the RTCU if the external power should fail or be disconnected. By default the RTCU AX9 turbo is powered down when a power fail occur. This setting, however, can be changed. Please consult the RTCU-IDE on-line help for more information.

When the wakeup/ignition input is activated with a logical high, the RTCU AX9 turbo unit will wake up if it was in power down mode.

There are five different ground labels: External Ground (XGND), Signal Ground (SGND), Digital Ground (GND), Analog Ground (AGND) and AC power ground (PE). The signal, digital and analog grounds are filtered from the power ground. External ground must only be used as a DC power supply return path. The AC ground is used in order to have a common reference between external AC powered system and the internal system. The digital ground is used as ground reference for digital I/O's, signal ground is used as ground reference for serial interfaces, and the analog ground is used as a low noise analog ground reference for the analog inputs.

Dual Supply Note:
The RTCU AX9 turbo unit can be supplied with both VAC and VDC at the same time. The unit will run on the VAC supply if the VDC supply voltage is < +24VDC. If the VDC supply voltage is higher it will run on the VDC supply.

Please refer to the RTCU on-line help for information on how to check the supply type from within an application.

Logic IO ApS.   Ph: (+45) 7625 0210
Holmboes Allé 14   Fax: (+45) 7625 0211
8700 Horsens   Page 12 of 45   support@logicio.com
Denmark   www.logicio.com

DC Supply

The RTCU AX9 turbo unit can be supplied with 8-36VDC from an external DC power source. Positive power is applied to the DCIN pin and ground is connected to the XGND pin.

The DC supply of the RTCU AX9 turbo is protected against wrong polarity. If a system ground is connected to either SGND or AGND, a wrong polarity on the supply lines will destroy the internal GND connection.

Please Note:
- Minimum 15VDC supply is necessary for 0-10V analog output and 12V DC out.
- Minimum 16VDC supply is necessary for digital inputs 1-4 to work as S0 compliant inputs.

VDC Supply terminals

Terminal Name	Description
DCIN	Power supply, positive (+) connection.
XGND	Power ground, negative (-) connection.

Logic IO ApS.   Ph: (+45) 7625 0210
Holmboes Allé 14   Fax: (+45) 7625 0211
8700 Horsens   Page 13 of 45   support@logicio.com
Denmark   www.logicio.com
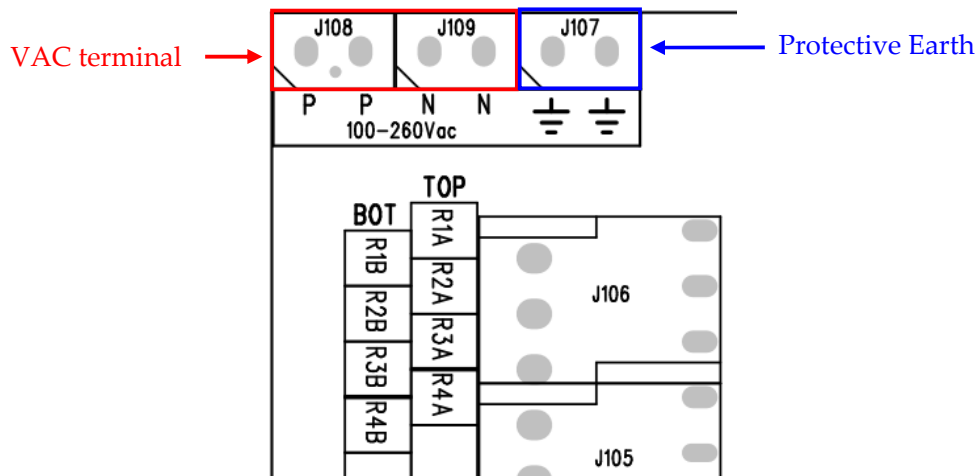

AC Supply

The RTCU AX9 turbo unit can be supplied with 100-265VAC (50/60Hz) from a standard wall plug or any other high-voltage VAC power rail.

The AC supply of the RTCU AX9 turbo is a highly-efficient switch mode power supply and the AC input is protected internally with a 2A/250V Fast Acting non-replaceable fuse.

AC power must be applied between the **N** and **P** on the designated screw terminals.

Protective Earth (**PE**) connection terminals are labeled with the sign ⏚.

VAC Supply terminals

Terminal Name	Description
N	100-260VAC (50/60Hz) **N**ull input
N	*(internally tied together)*
P	100-260VAC (50/60Hz) **P**hase input
P	*(internally tied together)*
⏚	Protective Earth connector

Please Note:

The two pairs of **N** and **P** terminals, and the terminal marked with ⏚ are internally connected.

There is high voltage on certain areas of the PCB (Printed Circuit Board) when supplied with AC mains. There is a risk of electrical hazard therefore avoid touching the PCB and the components during operation.

Be aware that the supply filter contains capacitors that may remain charged after the equipment is disconnected from the supply. Although the stored energy is within the approved safety requirements, a slight shock may be felt if the plug pins are touched immediately after removal.

Refer all servicing and handling to qualified personnel.

Logic IO ApS.		Ph: (+45) 7625 0210
Holmboes Allé 14		Fax: (+45) 7625 0211
8700 Horsens	Page 14 of 45	support@logicio.com
Denmark		www.logicio.com

An optional back-up AC/DC converter module can be mounted. If one of the modules is permanently damaged, the second module will supply the system. Using the VPL function boardGetACSupply(), it is possible to check the status of both AC/DC converter modules separately. Please consult the RTCU IDE on-line help for detailed information.

Please note that both modules are connected to the same AC supply input terminals. If the unit is exposed to excessively high-voltage, both modules will be damaged. Please also note that both modules will be running concurrently and that it is not possible to enable/disable the modules.

Please note:

The DC ground of the AX9 series is isolated from the AC ground because of the nature of AC-to-DC converting. As these two grounds are not tied together anywhere in the AX9, the DC ground may appear as "floating ground" to the outside if the AX9 ground is not connected to the same reference as the outside and a potential difference may occur. This difference can interrupt the behavior of the unit and in worst case damage that part of the unit. This must be taken in consideration when the AX9 series are supplied with AC supply. When the AX9 is supplied with DC voltage, this "potential difference" issue may not be observed as the DC power supply usually has the same potential as the rest of the system.

In order to avoid this, the **Earth** connection on the AC supply rail can be connected to the terminal that has been marked with the symbol ⏚.

For circuitry in situations where significant Earth ground currents can flow isolating the DC ground from Earth grounds may be desired. In this case the DC ground may be tied together with the Earth ground through a high impedance connection.

For the best EMI performance/ESD immunity in combination with a common reference it is recommended to connect DC ground and Earth together with a low-inductance connection.

Logic IO ApS.   Ph: (+45) 7625 0210
Holmboes Allé 14   Fax: (+45) 7625 0211
8700 Horsens   Page 15 of 45   support@logicio.com
Denmark   www.logicio.com

Digital I/O

The RTCU AX9 turbo unit has five digital inputs and four normally-open relay outputs. The outputs are high performance relays with good current handling capabilities.

Digital input 1-4 have multiple operating modes. Please refer to the digital input section for additional information.

Relay outputs

The digital outputs control four relays and they act like normally-open contacts, where one side must be connected to a source that needs switching and the other contact terminal is the output. The source can be either VAC or VDC but the maximum switchable voltage and current must not be exceeded. Please refer to specification page.

There are no internal connections to the relay outputs and a source must therefore always be connected to one of the relay terminals for the output to work. If power is removed or a power-fail occurs on the RTCU AX9 turbo, it will switch to normally-open.

The RTCU AX9 turbo unit offers a very advanced power management which makes it possible to have one or more outputs enabled while the RTCU is in low-power mode. Please consult the RTCU IDE on-line help for more information.

Relay output terminals

Terminal Name	Description

R4B	

Load noise

If highly inductive loads (such as high power contactors) are connected to the relays, it may in certain cases be necessary to externally connect a clamping diode parallel with each inductive DC load or connect an RC snubber circuit parallel with each inductive AC load.

For DC applications Vishay UF5405-E3/54 or similar is recommended and for AC applications AMPOHM FE-SP-HDR23-47/100 (47nF/100 ohm) or similar is recommended.

Logic IO ApS.   Ph: (+45) 7625 0210
Holmboes Allé 14   Fax: (+45) 7625 0211
8700 Horsens   Page 16 of 45   support@logicio.com
Denmark   www.logicio.com

Digital inputs / S0 inputs / wakeup (*ignition*) input

The five digital inputs are all low-pass filtered (*450kHz*) and transient-protected. To activate the inputs, connect a positive voltage between the corresponding input (DINx) and SGND.

Digital input 1-4 can be configured individually as S0 input (*IEC62053-31, Class A*) and DIN5 can work as wakeup (*ignition*) input.

By default the digital inputs are configured as normal inputs. For placement and configuration of the hardware jumpers inside the unit, please refer to the configuration guide in Appendix A.

S0 compliant inputs (*IEC62053-31, Class A* compatible)

In S0 configuration the relevant RTCU AX9 turbo input will act as a 'pulse input device', and a current is supplied into the input connector so that a simple switch between SGND and the appropriate input will activate it. This is used in most electricity metering equipment.

Please note: The RTCU AX9 turbo unit must be supplied with a minimum of 16 VDC or AC power for the S0 mode to work correctly.
S0 is enabled by default and may be disabled by the application to save power.

Logic IO ApS.   Ph: (+45) 7625 0210
Holmboes Allé 14   Fax: (+45) 7625 0211
8700 Horsens   Page 17 of 45   support@logicio.com
Denmark   www.logicio.com

Wakeup (*ignition*) input

The DI5 / wakeup (*ignition*) input is a special input as it also functions as the wakeup input. If the input is activated with a logical high or low (Wait-For-Event mode only) when the RTCU AX9 turbo is in low power mode, it will wake the unit. A power apply will also wake the unit up if it is in power-down mode or in Wait-For-Event mode with power apply and/or ignition selected for wakeup.

The input is de-bounced with a period between 1-2 ms when used as a digital input therefore any logical level applied to this input must be longer than 2 ms to be valid.

The power management allows for the possibility of configuring a wakeup on one or more digital inputs with individually configured falling- or rising edge detection. Please consult the RTCU IDE on-line help for more information.

For placement and configuration of the hardware jumpers inside the unit, please refer to the unit configuration guide in Appendix A.

Digital input terminals

Analog I/O

Analog inputs

The RTCU AX9 turbo unit has four analog inputs which can be configured individually to work either as voltage or current measurement inputs by using the configuration jumper. The range in voltage mode is 0-10VDC and in current mode 0-20mA.
The conversion resolution is 12 bit.

By default the analog inputs are configured as voltage inputs and are converted to a digital value with a resolution of 10-bit before being presented to the application (0..1023). The application can change the resolution to the full 12 bit (0..4095). Please consult the RTCU IDE for further details.

The input signal is connected between AINx and AGND. AGND must be connected to the reference of the connected equipment. Please be aware that deviations may occur, as the system is very noise sensitive. Avoid long, unshielded wires and high current, fast changing signals routed parallel to the analog signals.

The inputs are low-pass filtered, ESD- and transient-protected.

As default the inputs are configured as voltage inputs. For placement and configuration of the hardware jumpers inside the unit, please refer to the unit configuration guide in Appendix A.

Analog outputs

The analog outputs can individually be configured to work either as voltage or current outputs. The range in voltage mode is 0-10VDC and in current mode 0-20mA. The resolution of the digital-to-analog converter is 10bit or 1024 in decimal scale.

The decimal value for 10V/20mA output is 1023 and 512 for 5V/10mA.

As default the outputs are configured as voltage outputs. For placement and configuration of the hardware jumpers inside the unit, please refer to the unit configuration guide in Appendix A.

The output signal is connected to external equipment between AOUTx and AGND. AGND must be connected to the reference of the connected equipment. Please be aware that deviations may occur, as the system is very noise sensitive. Avoid long unshielded wires and large fast-changing signals routed parallel to the analog signals. In current mode the specifications for the analog output are only valid if the load is maximum 250Ω.

Each output is ESD and transient protected.

Please note: The RTCU AX9 turbo unit must be supplied with minimum 15 VDC or AC in order for the analog outputs to work according to specifications.

Analog output terminals

USB programming port

The mini-USB port is for programming and communicating with the RTCU IDE (or other RACP compliant applications). A standard USB cable can be used between the unit and the PC.

Ethernet

The RTCU AX9 turbo offers an on-board IEEE 802.3 compatible 10BASE-T Ethernet MAC controller and transceiver for communication with peripherals and back-end systems over standard Ethernet. Please refer to the RTCU IDE documentation for details on the usage of this interface.

RS232 communication ports (EIA/TIA-232 and V.28/V.24 compatible)

Two general purpose RS232 ports available on the RTCU AX9 turbo unit. Both are compliant with the EIA/TIA-232 standard.

RS232 port 1

This port is a general-purpose RS232 serial port and does not support handshaking. This serial port share resources with the RS485 port 2 and only one of them can be active at a given time.
The signals are available on the angled front row terminals.

SER1 terminals

Terminal Name	Description
SER1_TXD	Transmit data from serial port 1, RS232-compatible.
SER1_RXD	Receive data for serial port 1, RS232-compatible.
SGND	Signal ground.

RS232 port 2

Serial port 2 is a general-purpose RS232 port with RTS/CTS handshaking signals present.
The signals are available on the angled back row terminals.

SER2 terminals

Terminal Name	Description
SER2_TXD	Transmit data from serial port 2, RS232-compatible.
SER2_RXD	Receive data for serial port 2, RS232-compatible.
SER2_CTS	Clear-To-Send.
SER2_RTS	Request-To-Send.
SGND	Signal ground.

RS485 communication ports (*EIA/TIA-485-A compatible*)

RS485 is a multi-drop network with a maximum of 32 units connected simultaneously to the bus. The RS485 bus contains an RS485+ (*non-inverting*) and an RS485- (*inverting*) signal as well as a signal ground which must always be connected to the common signal ground for all units connected to the RS485 bus.

The maximum cable length for the RS485 bus is according to the EIA/TIA-485-A standard (max. 1200m @ <100kbit); this limit is highly influenced by the quality of the cable, signaling rate, noise etc.

At longer cable lengths, noisy environments, or high communication speeds, it might be necessary to terminate the transmission line with a 120[1] ohm resistor at each end of the transmission line to terminate it and avoid signal reflections.

When the RTCU AX9 turbo is used as endpoint unit the hardware jumper TER1 and TER2 can be installed to terminate the RS485 communication lines with 120Ω.

Both RS485 ports can be used as general-purpose RS485 serial port or as I/O extension module(s) port. When used with supported MODBUS IO extension modules, general purpose use is disabled. The RS485 port signals are available on the angled terminals.

Further details on the MODBUS I/O extension modules and use are available in the RTCU IDE on-line help.

By default the RS485 communication lines are not terminated with 120 Ω. For placement and configuration of the hardware jumpers inside the unit, please refer to the configuration guide in Appendix A.

---

[1] Assuming use of a CAT5 twisted pair cable

8700 Horsens   Page 23 of 45   support@logicio.com
Denmark   www.logicio.com

RS485 port 1

RS485 signals are available on the angled back terminals.

If TER1 jumper is inserted, a 120Ω endpoint resistor is enabled. For the location of TER1 refer to Appendix A

RS485 port 1 terminals

Terminal Name	Description
RS485_1+	RS485 non-inverting signal (A)
RS485_1-	RS485 inverting signal (B)
SGND	Signal ground

This RS485 port must be addressed as **port 2** when using the VPL API such as the serOpen function.

RS485 port 2

The RS485 port is available on the angled front terminals.

Internally this RS485 port and the RS232 serial port 1 share the same signals and only one can be active at any given time.

If TER2 jumper is inserted, a 120Ω endpoint resistor is enabled. For the location of TER2 refer to Appendix A

RS485 port 2 terminals

Terminal Name	Description
RS485_2+	RS485 non-inverting signal (A)
RS485_2-	RS485 inverting signal (B)
SGND	Signal ground

This RS485 port must be addressed as **port 0** when using the VPL API such as the serOpen function.

Logic IO ApS.   Ph: (+45) 7625 0210
Holmboes Allé 14   Fax: (+45) 7625 0211
8700 Horsens   Page 24 of 45   support@logicio.com
Denmark   www.logicio.com

1-Wire

The 1-Wire bus is available on the angled front row terminals. All 1-Wire communication goes through a single connection and all 1-Wire devices connected to this connection retrieve their power directly from the bus (called parasitic power). For this only two wires are needed – the 1-wire signal and the ground reference thus allowing minimal cable installations.

For 1-Wire ID-Button readers, which include a built-in LED, a dedicated output is available for this purpose. Please consult the RTCU IDE documentation for further information.

For further information regarding modular 1-wire concept, please refer to the document "Modular 1-Wire Concept Technical Manual" on the Logic IO webpage.

1-Wire terminals

Name	Description
1Wire	1-Wire bus.
1Wire-LED	1-Wire ID-Button LED output.
SGND	Signal ground.

DC-Out

Two DC outputs are available on the RTCU AX9 turbo for supplying external equipment; a 3.3V and a 12V/24V output. It is possible to control these DC outputs in order to save power.
Both DC outputs are short circuit- (to ground), ESD- and transient-protected.

Make sure not to exceed the current specification of the outputs and be aware of inrush currents of the external equipment that may exceed the specifications.

The DC outputs must be enabled from the application. Please consult the RTCU IDE on-line manual for more information.

3.3V DC-Out
The +3.3V DC output can supply a maximum of 300 mA and is available on the angled back row terminals. This output is named boardDCOut in the RTCU online help.

12V/24V DC-Out
When using the jumper JP101 either 12V or 24 DC is available on the DC-out terminal. The 12V DC output can supply a maximum of 500 mA and the 24V DC output can supply a maximum of 250 mA. The DC-Out is available on the top row of the stacked terminals. This output is named boardDCOut2 in the RTCU online help.

Logic IO ApS.		Ph: (+45) 7625 0210
Holmboes Allé 14		Fax: (+45) 7625 0211
8700 Horsens	Page 25 of 45	support@logicio.com
Denmark		www.logicio.com

The 12V DC-out requires a DC supply voltage of minimum 14 VDC or AC supply to be present and the 24V DC-out voltage requires that the AC supply is present.

The jumper that switches the DC-out voltage level between 12V DC and 24V DC is located front of the communication terminal rows as shown below:
DC-Out terminals

Terminal Name	Description
DCOUT33	+3.3V / 300 mA DC output for external equipment.
DCOUT	+12V/500 mA / +24V/250 mA DC output for external equipment.
SGND	Signal ground.

LED Indicators

Three bi-colored (red and green) and a single yellow LED indicator are present on the front of the unit (see graphical view).

Two bi-colored LED's (A and B) are available to the user and the remaining two Led's (S1 and S2) are signaling the status and possible errors of the RTCU unit.

User LED A and B

LED A and B are composed of four individually controllable Led's:

- LED named A on the front consists of LED 1 (green) and LED 2 (red).
- LED named B on the front consists of LED 3 (green) and LED 4 (red).

They are easily accessed from within the application program and it is possible to mix the LED's to obtain a third color: yellow. Please consult the RTCU IDE documentation for more information.

Logic IO ApS.   Ph: (+45) 7625 0210
Holmboes Allé 14   Fax: (+45) 7625 0211
8700 Horsens   Page 27 of 45   support@logicio.com
Denmark   www.logicio.com

System LED S1 and S2

The RTCU is equipped with two system LED's which show the status and possible errors of the RTCU unit.

The different patterns are listed in the table below. If the color of the system LED S1 is yellow, the unit is actively communicating with the RTCU IDE (or another program, supporting the RTCU RACP protocol).

The single yellow LED is signaling either the GSM module activity, or if all other LED's are off, that the RTCU is in the "wait for event" low power state.

S1: System LED1 pattern overview

Pattern	Description
Fastest blinking, green	The unit is initializing, preparing to start the application.
Fast blinking, green[1]	The unit has been forced into recovery mode with the use of the system switch. The application is not executing.
500ms On / 500ms Off green[1]	The unit is executing the application program
1.5s On / 0.5s Off. green[1]	The unit is executing the application program, while charging the internal back-up battery.
Fast blinking, red[1]	A runtime error has been detected in the program. Use the RTCU IDE to obtain the fault log.
Alternating Fast/Slow, red[1]	The unit has lost its firmware! This can only happen if, during a firmware upgrade, the RTCU unit loses power or the communication is lost completely. In this case, simply upload the firmware to the unit again.
75ms On / 925ms Off, green	Execution speed is different from full-speed.

S2: System LED2 pattern overview (GSM activity and "Wait For Event")

Pattern	Operating Status
Off	The GSM module is turned off
600 ms On / 600 ms Off	Missing SIM card or PIN code. Network search and logon in progress.
75 ms On / 3 s Off	Logged on to the network.
75 ms On / 75 ms Off / 75 ms On / 3 s OFF	A 3G/GPRS session is active.
Flashing	Indicates 3G/GPRS data transfer.
On	A voice or CSD session is active.
8 s OFF / 10 ms ON (and all other LED's OFF)	The RTCU unit is in low-power "Wait For Event" state.

---

[1] Or yellow when communicating with the RTCU IDE or another program, supporting the RTCU RACP protocol).

Switches

DIP-Switch

The RTCU AX9 turbo unit contains four dipswitches, where three of them are available for the application to use (*fourth dipswitch is reserved for GSM antenna switching.*) The dipswitches are located inside the unit (*see drawing below or graphical view*).

System switch (RST)

The RTCU AX9 turbo unit contains a combined reset/diagnostic switch. This switch is accessible from the front of the unit (see graphical view).

By activating the switch with a short press, the RTCU unit will do a complete reset as if the power was removed and reapplied.

If the reset switch is held down for approx. 3 seconds[1], the unit will enter recovery mode[2] where the application will not be started. In recovery mode the system will automatically turn on the GSM module to establish a connection to the GSM network and RTCU Gateway (if configured). This method will also activate the unit when the unit is in power-down mode.

---
[1] System LED S2 will flash three times when this state is entered.

[2] System LED S1 will indicates this state by fast blinking green or yellow.

Intrusion Detection

The RTCU AX9 turbo is provided with unique intrusion detection that detects unauthorized entry to the device. The detection circuitry uses a Light Dependent Resistor (LDR) sensor in order to detect removal of the lid. An event for monitoring the intrusion detection can be created in power saving modes, or the status of intrusion can be read in the user application. For details, please consult the RTCU IDE on-line help.

The LDR sensor is placed next to the angled terminals, close to the dip switches, as shown in the following illustration:
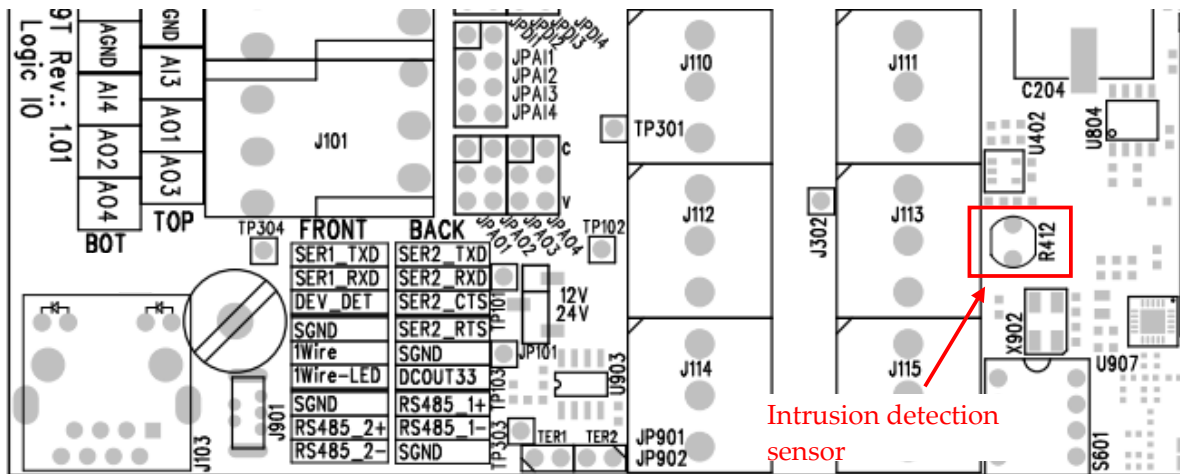

For correct operation the intrusion detections sensor must not be covered inside the box.

Please note: The sensor is very sensitive to light. If the lid is faced to strong light source or directly to the sun-light false intrusion alarm may be triggered. In order to avoid this, the lid may need to be coated/covered with a material that doesn't let the light pass through.

Logic IO ApS.   Ph: (+45) 7625 0210
Holmboes Allé 14   Fax: (+45) 7625 0211
8700 Horsens   Page 30 of 45   support@logicio.com
Denmark   www.logicio.com

Internal Li-Ion battery

The RTCU contains an internal Li-Ion battery for operation even when the external power is absent making it possible to report power loss etc. Please note that when external power is removed, the unit will be powered down by default. This setting can be changed as documented in the RTCU IDE documentation.

The relay outputs will be disabled (OFF) when a power fail occurs as the internal battery cannot provide the supply voltage needed.

The battery charging is completely automated and handled internally by the RTCU unit – leaving no need for user interaction. Different kinds of functions (Battery low, Charger enable, Charging status, etc.) are available to the user application.

The charge current is relatively high, for a shorter charge time, as specified in the technical specification. Make sure both power supply and cables can handle the high current.

The battery will be charged whenever a power fail has occurred to establish the capacity thus making the battery ready for the next power fail. A maintenance charge will start every 20 days after the last charge. This is to compensate for the battery self-discharge etc.

By default the battery cannot be charged above 45°C or below 0°C. The RTCU offers charging down to -10 °C using a specialized algorithm to protect the battery.

If the temperature is above 45°C the charging will not start and will be postponed until it is below this threshold.

The temperature has a very high influence on the battery capacity. At 0°C the capacity has dropped to 60% of the initial capacity and it falls dramatically at lower temperatures.

The battery cycle (numbers of charges and discharges) also influences the capacity. After 300 cycles the capacity has dropped to approximately 80% of the initial capacity.

Warning
Misusing the RTCU unit may cause the built-in battery security circuit to be damaged.
- *Do not place the RTCU unit in high temperature locations such as in direct sunlight or near engines. Using the RTCU unit in this environment may result in loss of battery performance and a shortened life expectancy.*
- *Do not expose the unit to water, salt water or allow the battery to get wet.*
- *Avoid strong impacts and shocks.*

Logic IO ApS.   Ph: (+45) 7625 0210
Holmboes Allé 14   Fax: (+45) 7625 0211
8700 Horsens   Page 31 of 45   support@logicio.com
Denmark   www.logicio.com

Operating Temperature

The operating temperature of the RTCU AX9 turbo is specified as **-30 to 60 degrees Celsius** when operating with all peripherals in standard (non-fault) mode from an AC power source. The temperature on the board is continuously monitored and at an absolute maximum of **80 degrees Celsius** the device will fault and enter a safe mode until reset. It is therefore important not to reach this maximum board temperature at any time.

If required certain actions can be taken to reduce the temperature inside the encapsulation:

- Supply the device from an DC power source.
- Reduce the use of peripherals with high power consumption, such as:
  12/24V DC out, relays on, S0 digital input low and analog current output mode.
- Remove the lid (if possible) so that the heat can escape.
- Make ventilation holes in the encapsulation with optional mechanical circulation.
When operating in an environment with a constantly elevated temperature, it is recommended to remove the Li-Ion battery and instead use an external back-up source if required.

GSM Antenna

The RTCU AX9 turbo offers support for both an on-board internal GSM antenna and a user supplied external antenna connected to the SMA female connector at the top of the encapsulation.

The active antenna can be selected by the application by using the **gsmSetAntennaMode()** function or alternatively with a DIP switch. By default (as delivered from factory) the active antenna can be selected by DIP switch 4 and is set for external antenna use.

Fax: (+45) 7625 0211
support@logicio.com
www.logicio.com

Location of the internal/external GSM antenna and the DIP-switch 4:

GSM antenna selection

gsmSetAntennaMode	DIP-switch 4	GSM Antenna
1	Ignored	Internal antenna
2	Ignored	External antenna
3	On	Internal antenna
	Off	External antenna

Please refer to the RTCU IDE online help for further information on **gsmSetAntennaMode**

When installing the RTCU AX9 turbo please make sure that the antenna is not in close proximity of metallic parts or anything else that can influence the efficiency of the GSM antenna.

SIM-Card

The RTCU AX9 turbo unit contains a standard mini-SIM card reader which is located inside the unit (*see drawing on next page or graphical view*) and is easily accessed. The SIM card reader is lid based with a mechanical lock system for secure installation of the SIM card. Please refer to Appendix B for the SIM card installation guide.

Logic IO ApS.   Ph: (+45) 7625 0210
Holmboes Allé 14   Fax: (+45) 7625 0211
8700 Horsens   Page 33 of 45   support@logicio.com

Micro SD card reader

The RTCU AX9 turbo unit has a standard Micro SD card reader which is located inside the unit (see drawing below or graphical view). The Micro SD card reader is a lid based system with a mechanical lock for reliable insertion and operation.

The RTCU AX9 turbo supports a FAT file-system for standard PC-compatibility. Up to 32 GByte capacity is supported. Please refer to Appendix C for SD-Card installation guide.

Both the card detect and the write protect[1] information is available to the user through the application. Please consult the RTCU IDE on-line help for more information. Avoid removing the Micro SD card during access to the card.

---
[1] This signal is not available, but for compatibility reason the software function will always return "not write protected".

Logic IO ApS.   Ph: (+45) 7625 0210
Holmboes Allé 14   Fax: (+45) 7625 0211
8700 Horsens   Page 34 of 45   support@logicio.com

Approved Micro SD cards

To ensure the highest performance and compatibility it is important to use SD-CARDs that have been approved and tested by Logic IO.

The following **Commercial Grade** micro SD-CARDs from Sandisk have been approved for use:

Capacity	Sandisk SKU
4GB	SDSDQM-004G-B35
8GB	SDSDQM-008G-B35
16GB	SDSDQM-016G-B35
32GB	SDSDQM-032G-B35

Commercial grade SD-CARDs can be used in applications where the limited write endurance is acceptable - for example if the SD-CARD is often replaced. Commercial grade SD-CARDs should *not* be used in applications where a potential failure on the media is considered mission critical.

For applications that use the SD-CARD media extensively and where a failure is critical, it is recommended to use approved **Industrial Grade** SD-CARDs.

Logic IO has approved and recommends industrial grade SD-CARDs from **ATP** that is available in capacities from 512 MB to 32 GB.

ATP Industrial Grade SD/SDHC Cards are optimized for demanding industrial applications with consistent performance in all conditions. ATP uses reliable SLC flash technology with a flash endurance more than 20 times higher than commercial grade products with MLC flash.

The differences in write endurance between commercial grade MLC flash and ATP Industrial grade SLC flash are quite remarkable for write-intensive applications:

Product Line	Details	Total Writeable Data Prediction @ 1GB	Time Prediction @ 500 writes a day (1GB)
ATP Industrial Grade	SLC Flash + Advanced Wear Leveling	80,000GB or 2,800,000 writes	**5,740 days** or **15.7 years**
Commercial Grade	Grade A MLC (2 bits per cell) + Advanced Wear Leveling	4,000GB or 140,000 writes	**280 days**

Logic IO ApS.   Ph: (+45) 7625 0210
Holmboes Allé 14   Fax: (+45) 7625 0211
8700 Horsens   Page 35 of 45   support@logicio.com

ISM RF

The RTCU AX9 turbo is provided with an ISM band RF module which gives the unit the ability to communicate with other devices wirelessly. The unit communicates in the 868 MHz frequency band. The RF module hardware is set up to comply with the European EN 300 220 requirements. Please consult the RTCU IDE on-line help for more information on how to configure the RF module.

In the table below the specifications of the RF module is shown:

RF module specifications

Data	Value
Max. Output Power	+10 dBm
Frequency	869,4 MHz
Modulation	GFSK
Baud Rate	38,4 kbaud

Please Note: Listen **B**efore **T**alk (LBT)[1] functionality to comply with EN 300 220 is implemented in the RF module. If the unit is installed in an environment with disturbances in the same frequency band, difficulties in RF transmission will be observed.

Barcode / unit type

The barcode label found on the RTCU AX9 turbo unit contains the serial number.
The first three digits in the serial-number identify the unit type, and for RTCU AX9 turbo this unique code is **296**.

The barcode format used: 2/5 Interleaved with Check Digit

---

[1] LBT is a term used in radio communication whereby a radio transmitter senses its radio environment before it starts a transmission

Power consumption

Detailed information on the maximum power consumption of the RTCU AX9 turbo unit in different states and different supply types is listed below.

Please Note: Values marked with (*) are average and should be considered as guidelines as they may vary depending on the GSM signal strength.

External DC supply

When the RTCU AX9 turbo unit is powered from an external DC power source the power consumptions will be as follows.

Maximum power consumption

	8V	12V	30V		
Unit active	65	50	20	mA	
Unit active with GSM on*	80	60	25	mA	GSM idle @ -67dBm*
Unit active RF sending	82	62	27	mA	
Unit active with ethernet on	175	150	50	mA	With ethernet activity
Unit active while charging	1000	630	250	mA	
Unit in power-down	1	0.6	0.4	mA	Restart on DIN5, RTC
Unit in "wait for event"	1	0.6	0.4	mA	Resume on DIN, RTC
Unit in "wait for event"	10	6	3	mA	Resume on RS232
Unit in "wait for event"	25	20	8	mA	Resume on GSM activity

Internal battery

If the external power source is removed and the internal battery is enabled, the power consumption from the battery will be as listed below.

Maximum power consumption

	BAT		
Unit active	85	mA	
Unit active with GSM on*	105	mA	GSM idle @ -67dBm*
Unit active RF sending	105	mA	
Unit active with ethernet on	225	mA	With Ethernet activity
Unit in power-down	1	mA	Restart on DIN5, RTC
Unit in "wait for event"	1	mA	Resume on DIN, RTC
Unit in "wait for event"	12	mA	Resume on RS232
Unit in "wait for event"	35	mA	Resume on GSM activity

Note: Power consumption from a fully charged battery.

External AC supply

When the RTCU AX9 turbo unit is powered from an external AC, the power consumptions will be as following.

Maximum power consumption

	220VAC		
Unit active	6	VA	
Unit active with GSM on*	7	VA	GSM idle @ -67dBm*
Unit active RF sending	7	VA	
Unit active while charging	18	VA	
Unit in power-down	4	VA	Restart on DIN5, RTC
Unit in "wait for event"	4	VA	Resume on DIN, RTC
Unit in "wait for event"	5	VA	Resume on RS232
Unit in "wait for event"	5	VA	Resume on GSM activity

Specification for the 3G / HSDPA GSM engine

The RTCU AX9 turbo is available in two versions for use in various geographical areas with different GSM frequencies:

SKU version	GSM frequency	UMTS/HSDPA frequency
AX9T	900/1800 MHz	900/2100 MHz
AX9T-A	850/900/1800/1900 MHz	850/1900 MHz

Specifications:

Chipset:	Qualcomm QSC6270 single-chip engine.
HSDPA:	Release 5 (category 6). Max 3.6 Mbps.
EDGE:	Downlink only. Max. 236.8 Kbps.
GPRS:	Multi-slot Class 12. Max. 85.6 Kbps.
UMTS:	Release 99/5. Max. 384 Kbps.
GSM:	Release 99/4.
CSD:	64 Kbps.
Speech Codec Modes:	HR, FR, EFR, AMR, AMR-WB.
Echo Arithmetic:	Echo cancellation, Noise reduction.
eCall:	Accident, Emergency Services[1]

---

[1] Currently not supported in firmware.

Appendix A – Unit configuration guide

The RTCU AX9 turbo has many features and some of them require configuration by using hardware jumpers inside the unit. A brief overview over the jumper settings can be found in the following table.

Feature	Jumper	State	Default state
Communication	TER1 (*RS485_1*)	Installed	120Ω resistor enabled.
		Not installed	120Ω resistor disabled (*default*).
	TER2 (*RS485_2*)	Installed	120Ω resistor enabled.
		Not installed	120Ω resistor disabled (*default*).
Analog input	JPAI1	Installed	AI1 current measurement.
		Not installed	AI1 voltage measurement (*default*).
	JPAI2	Installed	AI2 current measurement.
		Not installed	AI2 voltage measurement (*default*).
	JPAI3	Installed	AI3 current measurement.
		Not installed	AI3 voltage measurement (*default*).
	JPAI4	Installed	AI4 current measurement.
		Not installed	AI4 voltage measurement (*default*).
Analog output	JPAO1	Position C	AO1 current.
		Position V	AO1 voltage (*default*).
	JPAO2	Position C	AO2 current.
		Position V	AO2 voltage (*default*).
	JPAO3	Position C	AO3 current.
		Position V	AO3 voltage (*default*).
	JPAO4	Position C	AO4 current.
		Position V	AO4 voltage (*default*).
Digital input	JPDI1	Position S	DI1 S0.
		Position N	DI1 normal (*default*).
	JPDI2	Position S	DI2 S0.
		Position N	DI2 normal (*default*).
	JPDI3	Position S	DI3 S0.
		Position N	DI3 normal (*default*).
	JPDI4	Position S	DI4 S0.
		Position N	DI4 normal (*default*).
DC-Out voltage	JP101	Position 12V	12V DC out.
		Position 24V	24V DC out.

Logic IO ApS.   Ph: (+45) 7625 0210
Holmboes Allé 14   Fax: (+45) 7625 0211
8700 Horsens   Page 40 of 45   support@logicio.com
Denmark   www.logicio.com

TER1 and **TER2**
Enables/disables on-board 120Ω line termination resistors which are according to standards; RS485 communication requires a proper line termination value (120Ω *assuming a CAT5 twisted pair cable is used*) resistors in both ends of the bus. If the RTCU AX9 turbo unit is used as endpoint, the relevant jumper can be installed.

JPAI1, **JPAI2**, **JPAI3** and **JPAI4**
These jumpers are used to select between current and voltage input. With a jumper installed on the relevant analog input, it will measure current between 0-20mA.

JPAO1, **JPAO2**, **JPAO3** and **JPAO4**
These jumpers are used to select either current or voltage output. With the relevant jumper installed in position "**C**" the output is a current between 0-20mA, when installed in position "**V**", output is a voltage between 0-10V.
JPDI1, **JPDI2**, **JPDI3** and **JPDI4**
These select either normal or Class A S0 input for DIN1-4. With the relevant jumper installed in position "**S**", the input is configured to S0 when installed in position "**N**", the input is a normal digital input.

12V and 24V
These jumpers are used for connecting the DC OUT terminal to 12V or 24V.

Appendix B – Installing the SIM card

The SIM card reader is a lid based type with a mechanical lock for secure installation of the SIM card.

Open the hinged lid of the SIM card reader, orientate the card as shown below, and insert it into the lid of the card reader. Close the lid and slide the metal locking mechanism to the locked position, as shown with an arrow and text on the lid until a click is heard.

To remove the card, slide the metal locking mechanism to the unlocked position as shown with an arrow and text on the lid and open the lid. The SIM card can now be removed.

SIM card orientation.

SIM inserted and locked

Appendix C – Installing the Micro SD card

To insert a Micro SD card into the reader open the hinged lid of the card reader, orientate it as shown below, and push the card into the lid. Close the lid and slide the metal lid in the direction that is shown with an arrow on the lid until a click is heard.

Remove the card by sliding the lid in the direction that is shown with an arrow on the lid and then open the lid. Avoid removing the Micro SD card during access to the card.

Micro SD card orientation.

Micro SD card inserted and locked.

RTCU AX9 turbo Specifications

Processor and Main-memory
- Powerful 32-bit ST ARM7 processor.
- 2112 KB fast execution RAM.
- 4532 KB Flash for firmware/application.

Storage
- 7.5 MB persistent data flash.
- 8 MB internal FAT32 flash drive.
- 1 MB circular automatic datalogger.
- 20 KB FRAM with fast access / unlimited write endurance.
- SD-CARD reader with up to 32 GB.

GSM
- Qualcom QSC6270 single chip.
- 3G / HSDPA with up to 3.6 Mbps.
- UMTS / EDGE / GPRS support.
- CSD with up to 64 Kbps.
- SMS / PDU.
- DTMF decoding / transmission.
- Digitized voice playback / IVR.
- eCall Accident / Emergency services.
- Mini-SIM 1.8/3 volt.
- Internal SIM card-reader.
- Internal GSM antenna.
- External or internal antenna selecable by DIP-switch or user application.
- Optional Gemalto eSIM.

User Interaction
- Three bi-colour LED / Yellow status.
- DIP-switches.
- Reset/recovery switch.
- Antenna selection dip-switch.
- Configuration jumpers.
- Mini-USB for service port.
- Intrusion-detection.

Battery and Charger
- On-board 2Ah (nominal) Li-Ion battery.
- Intelligent charger with temperature throttle and sub-zero degrees support.
- On-board temperature sensor.

Digital/Analog Interface
- 4 x relay output.
  Max. 5A @ 250VAC / 30 VDC
- 5 x digital inputs.
  Logic high: 6 to 40 VDC.
  Logic low: -5 to 3 VDC.
- 4 x IEC62053-31 Class A input.
- Digital input #5 can be used as ignition.
- 4 x analog inputs.
  Range is 0..10VDC or 0..20 mA
  Resolution: 12 bit
  Precision: ±1.5% FSR @ 25°C
- 4 x analog outputs.
  Range is 0..10VDC or 0..20 mA
  Resolution: 10 bit
  Precision: ±1.5% FSR @ 25°C
- Protected against transients and low-pass filtered.
- Expandable I/O with MODBUS.

Communication
- 10BASE-T Ethernet inferface.
- 1 x RS232 with control signals.
- 1 x RS485.
- 1 x shared RS232 / RS485.
- 1-Wire bus.
- On-board 868 Mhz ISM RF
  Up to 15 meter indoor /
  Up to 50 meter outdoor.
- ISM RF can be disabled for world-wide compliance requirements.

Power Management
- 5 execution speeds.
- Wait for Event: Timer, Digital input, RS232, GSM, Power change state, RF and Intrusion.
- Wait for event, from: 600 uA@12V.
- Supervision of supply voltage / type.

Internal Interfaces.
- Screw-terminals for:
  Power, I/O and 12/24V DCOUT.
- Angled screw-terminals for:
  RS232, RS485, 1-Wire and
  3.3V DCOUT.
- Mini-USB for programming/service.
- Standard RJ45 Ethernet connector.

External Interfaces.
- SMA Female connector for external GSM antenna.
- 3 x PG11 cable glands.
- 2 x PG9 blind plugs.

Physical Characteristics
- Encapsulation:
  Durable Polycarbonate plastic.
- Approx. 690 gram without accessories.
- W 130 x H 180 x D 60 mm.
  (wihout SMA and PG connectors.

Environmental Specification
- Operating temperature: -30 to 60°C.
- Battery charge temperature:
  -10 to 45 °C
- Recommended storage temperature:
  0 to 45°C.
- Humidity: 5..90% (non condensing).
- Ingress Protection: IP65.

Approvals
- R&TTE 1995/5/EC.
- CE. EMC directive 2004/108/EU.
- GSM engine: CE/GCF/FCC/PTCRB.

Warranty
- Two-years return to factory parts and labor.
- Optional warranty up to 5 years. (restrictions apply).

Technical data are subject to changes.
